C. PRIMARY RATE INTERFACE (PRI)

1. General

Integrated Services Digital Network (ISDN) - Primary Rate Interface (PRI) Service is a central office based service arrangement that utilizes ISDN architecture to provide network offerings. ISDN-PRI Service supports the simultaneous transmission of circuit switched voice and data and packet switched data transmission over a four-wire facility at a standard interface.

ISDN-PRI Service provides digital end-to-end access capable of supporting a combination of public and private network access services via a 1.544 Mbps (Megabits per second) digital facility between the customer's premises and the Company's serving central office. The 1.544 Mbps transmission speed is typically divided into twenty-three 64 Kbps (Kilobits per second) channels (known as B-Channels) and one 64 Kbps channel (known as a D-Channel). The channels are communication paths over which telecommunications services flow (e.g., data, image, video, and voice). ISDN-PRI Service does not provide ISDN terminals and special power arrangements at the customer's premises.

Each ISDN-PRI Service consists of four basic elements:

- PRI Access (A or B)
- PRI Facility
- "B" Channel (dedicated/allocated)
- Non-Facility Associated Signaling (NFAS) (24B PRI service only)

BUSINESS BUNDLED SERVICES

C. PRIMARY RATE INTERFACE (PRI) (Continued)

2. Conditions (Continued)

The general conditions specified in this tariff are applicable to all communication services offered by the Company. Additional conditions pertaining to specific service offerings are specified in various sections of this and other Company tariffs.

ISDN-PRI Access

PRI Access: The PRI Access A is the central office termination required for a PRI Facility between an ISDN-PRI capable central office and a customer-designated location. PRI Access typically provides twenty-three individual "B" Channels and one "D" Channel, 24 B Channels, or 23 B Channels and Backup D Channel.

PRI Facility: The PRI Facility provides 1.544 Mbps digital transport between the customer's location and the customer's serving central office. Where the customer's serving central office is not ISDN-PRI capable, a 1.544 Mbps digital private line facility will be needed to provide transport from an ISDN-PRI capable central office to the customer's serving central office except when the customer's serving central office is part of a Remote Switching Cluster.

Channels

ISDN-PRI Service is typically divided in capacities of twenty-three 64 Kbps "B" Channels and one 64 Kbps "D" Channel.

The "B" Channels can carry switched voice and switched data at transmission speeds of up to 64 Kbps. The channels can be configured for services such as voice, data, image, and video. The customer will be required to provide information regarding the types of services they intend to utilize over the "B" Channels. This permits the Company to furnish and maintain the services ordered and assure that tariff Conditions are followed.

BUSINESS BUNDLED SERVICES

C. PRIMARY RATE INTERFACE (PRI) (Continued)

2. Conditions

ISDN-PRI Service provides for the access to public and/or private services of the following call types over the same ISDN-PRI facilities:

- Public (DID and DOD Service)
- Circuit Switched Data
- Universal

ISDN-PRI Service is furnished from digital central office equipment located on Company premises and associated facilities within the Company's exchanges. ISDN-PRI Service and associated features are only available where equipment, operating conditions, and technology permit. A service inquiry must, therefore, be made to determine the availability of service in a particular area or exchange. Where facilities are not available or unusual expenditures are necessary to make them available, Special Construction charges as specified in the Construction of Outside Plant Facilities section of this Catalog may be applicable.

ISDN-PRI Service will not be provided with Off-Premises Stations or Extensions.

ISDN-PRI Service is offered on a 2- or 3-year term and volume plan (TVP). ISDN PRI Nonrecurring Charges do not apply to the initial installation of a TVP. Applicable Service Charges as identified in Section 3 of the General and Local Exchange Tariff apply to the initial installation of a TVP.

All conditions from WN U-17 apply for the Term and Volume Plan. All optional features can be provided on the Term and Volume Plans.

Changes between service periods, will incur a Service Order Charge - Subsequent as identified in Section 3 of the General and Local Exchange Tariff.

2. Conditions (Continued)

Channels (Continued)

The "D" Channel is used to carry information about calls (such as call request and call set-up) placed on the "B" Channels to/from the customer's location(s) from/to the serving ISDN-PRI central office. "D" Channels operate at 64 Kbps and provide signaling and control for the 23 "B" Channels. PRI does not allow any customer's data traffic to be passed over the "D" Channel.

A Backup "D" Channel is a "D" channel provisioned to automatically take over for a failed "D" channel in the event of trouble.

"B" Channel Configurations: "B" Channels can be:

- 1) dedicated or allocated to a specific service type, or
- 2) allocated or shared to access two or more service types, or
- 3) a combination of 1) and 2).

The "B" Channel Configuration types are listed below:

- "B" Channel Circuit Switched DID/DOD Service: Direct Inward Dialing (DID) is a service by which PBXs and Customized Multi-line Telephone Service systems allow callers to dial from the public network straight to a desired extension within the system without operator intervention. Direct Outward Dialing (DOD) is a service in which outgoing calls within a PBX or Flexible Digital Channel system can be placed directly by dialing an initial digit (access digit) and then the desired number without the aid of an operator. A mixture of the Flat Rate and Measured Rate DID/DOD voice only channel configurations service will not be allowed on the same customer premises.
- "B" Channel Circuit Switched connection to Switched Data Services: is available on an intraswitch basis, in which case usage rates will not apply (flat rate basis). When a customer is connected with the Switched Data Service offerings of entities other than the Company, the customer is responsible for payment of services provided by those Intermediary Customer Services providers.

C. PRIMARY RATE INTERFACE (PRI) (Continued)

2. Conditions (Continued)

Channels (Continued)

"B" Channel Configurations: (Continued)

To utilize dedicated trunk access, the customer must specify at subscription time the quantities of "B" Channels that will be dedicated for a specific service (DID, DOD, Universal, etc.) on the PRI Facility. The customer will be charged for the number of "B" Channels specified for those services that are flat rate. In addition, for those service offerings of entities other than the Company, the customer is responsible for payment of services provided by those entities (e.g. Switched Data). Tie Channels are optional and purchased out of WN U 17 Section 7.

Standard Features

Calling Number Identification: Allows the customer to have access to the directory number of the calling party.

Dedicated Trunk Access: A customer specified arrangement in which the "B" channels are assigned access to specified (e.g., DID and DOD service) services available in the ISDN-PRI serving central office.

Universal Trunk Access: A customer service arrangement of "B" channels in which the customer is allowed to use any of the "B" Channels to access any/all available services. The Universal Trunk Access will allow the customer to dynamically reconfigure ISDN-PRI "B" Channels to transport services such as DID, DOD, and Switched Data on an as needed basis.

BUSINESS BUNDLED SERVICES

C. PRIMARY RATE INTERFACE (PRI) (Continued)

2. Conditions (Continued)

ISDN-PRI Term and Volume Packages

ISDN-PRI Service is offered on a 2- or 3-year term and volume plan (TVP). Customer will be subject to termination liability charges as specified in this section and Section 2. The ISDN-PRI Access TVP includes the ISDN-PRI Access (A&B), standard features, Calling Number Delivery (CNID), NFAS and Channel Activations, excluding Call-by-Call and tie channels. Packages are available with or without DS1 Switched Facility and are offered as flat or measured rate voice/data under the Premium, Premium Plus or Basic calling plans. Available PRI Access configurations are 23B, 23B+D Additional, 24B or 23B + D-Channel Backup. Two-year TVP customers may subscribe to 3-year term commitment plan optional features or facilities. Tie Channels are in addition to these rates.

Changes to Term and Volume Plan (TVP)

All of a customer's Company provided ISDN-PRIs within a state will count toward the volume commitment threshold. TVP customers may change the number of ISDN PRIs during the TVP period. In the event customers under a TVP plan make subsequent ISDN-PRI increases or decreases that cause the total number of ISDN-PRIs to fall within a different threshold level, all remaining ISDN-PRIs will be billed at the applicable level rate for the remainder of the TVP period.

The customer must provide the account information of the ISDN-PRIs included in the TVP at the time of the initial installation of service and with each change to the service under the TVP.

Additions to ISDN-PRI Service

Customers may add ISDN-PRI services at the same monthly rates as specified in their initial plan or on a different term commitment basis. The commitment period for these additional ISDN-PRI services will not end concurrently with the initial commitment period.

BUSINESS BUNDLED SERVICES

C. PRIMARY RATE INTERFACE (PRI) (Continued)

2. Conditions (Continued)

Term Commitment Plans

Customers may convert their existing term commitment plans per the conditions set forth in Section 2, D, Termination Liability.

Conversion to a different term commitment plan or to a month-to-month service will require the customer to submit a change order. The ISDN PRI Nonrecurring Charges in this section will not apply, however, the Service Order Charge – Subsequent as identified in Section 3 of the General and Local Exchange Tariff will apply.

Two-year term commitment customers may subscribe to three-year term commitment plan optional features or facilities.

Termination Liability

When service is discontinued prior to the end of the term commitment period, termination liability charges will apply as set forth in WN U-17, Section 2, D, Termination Liability.

Customers with an existing ISDN-PRI term commitment or TVP may convert to a new term commitment or TVP without incurring termination liability charges as set forth in Section 2, D, Termination Liability, provided the value of the new term commitment or TVP is equal to or greater than the remaining value of the existing term commitment or TVP.

The termination liability charge will not apply when a customer converts from Digital Channel Service to ISDN-PRI. A temporary interruption of service will occur during a conversion. Additionally, the conversion may require a service rearrangement and telephone number change(s).

3. Definitions

B-Channel (Bearer Channel)

A channel used to carry digitized voice and data information at a speed of 64 Kbps.

Call by Call Trunks

An ISDN feature in which a communications path service arrangement allows the customer to carry all call types (e.g., DID, DOD, toll calls, Switched Data, etc.) on any of the "B" Channels on a two-way trunk. To utilize the Call-by-Call feature, the customer must specify at subscription time the total number of "B" Channels required and the types of services so that the database can be properly configured. Due to the differences in switch technology Call-by-Call service may not be available at all current or future ISDN provisioned central offices.

Clear Channel Capability

The capability to transport 64 Kbps over a channel with no constraint on the quantity or on the sequence of bits.

Channel

The electrical path provided by the Company between two or more terminating points for the transmission of information or intelligence.

D-Channel (Delta Channel)

A communications path that operates at 64 Kbps in support of network control signals.

Integrated Services Digital Network (ISDN)

A set of standards, which enable end-to-end digital transmission, access integration, and established standardization of points of interconnection over a single access line. End-to-end digital transmission eliminates the necessity for voice-band modems that use analog processing techniques. Access integration refers to utilizing a single ISDN line, whereby an end user over one line can access a wide variety of user information services such as voice, circuit switched data, and packet switched data.

C. PRIMARY RATE INTERFACE (PRI) (Continued)

3. Definitions (Continued)

Caller ID

A function, which allows a station to identify a caller.

ISDN-PRI Service Arrangement

The term is used to identify the provision of ISDN-PRI Service to a single customer. The customer may be provided service out of a single or multiple central offices. If a customer is provided service out of multiple central offices, all of the customer's locations would still be considered part of the same business or customer group.

Kbps

Kilobits Per Second.

Mbps

Megabits Per Second.

Non-Facility Associated Signaling (NFAS)

NFAS allows the D-Channel signaling entity to assign calls to channels on more than one interface (including the one containing the D-Channel). The collection of these B-Channels and the controlling D-Channels is called a PRI group. Up to 20 DS1 Facilities can be assigned to a PRI group.

3. Definitions (Continued)

Primary Rate Interface (PRI)

The term "Primary Rate Interface" denotes the connection of a 1.544 Mbps digital facility to the ISDN-PRI capable central office switch. The twenty-four channels are typically divided into twenty-three "B" Channels plus 1 "D" Channel. Software in the ISDN-PRI equipped central office switch defines the type of access services that will be carried (e.g., DID and DOD service) within the 1.544 Mbps digital facility.

Remote Switching Cluster

Remote Switching Clusters exist when the remote switch is dependent on the host switch for its software processing. A remote switch can process intra-office calls without the host switch.

System

An interconnected arrangement of exchange and private-line services provided from one central office for use at one premises. The combination of Basic Rate Interface Lines plus ISDN Access and ISDN Multiline Access forming a complete communications system for a single customer of record. The Intercom Function is permitted only among stations within a system.
