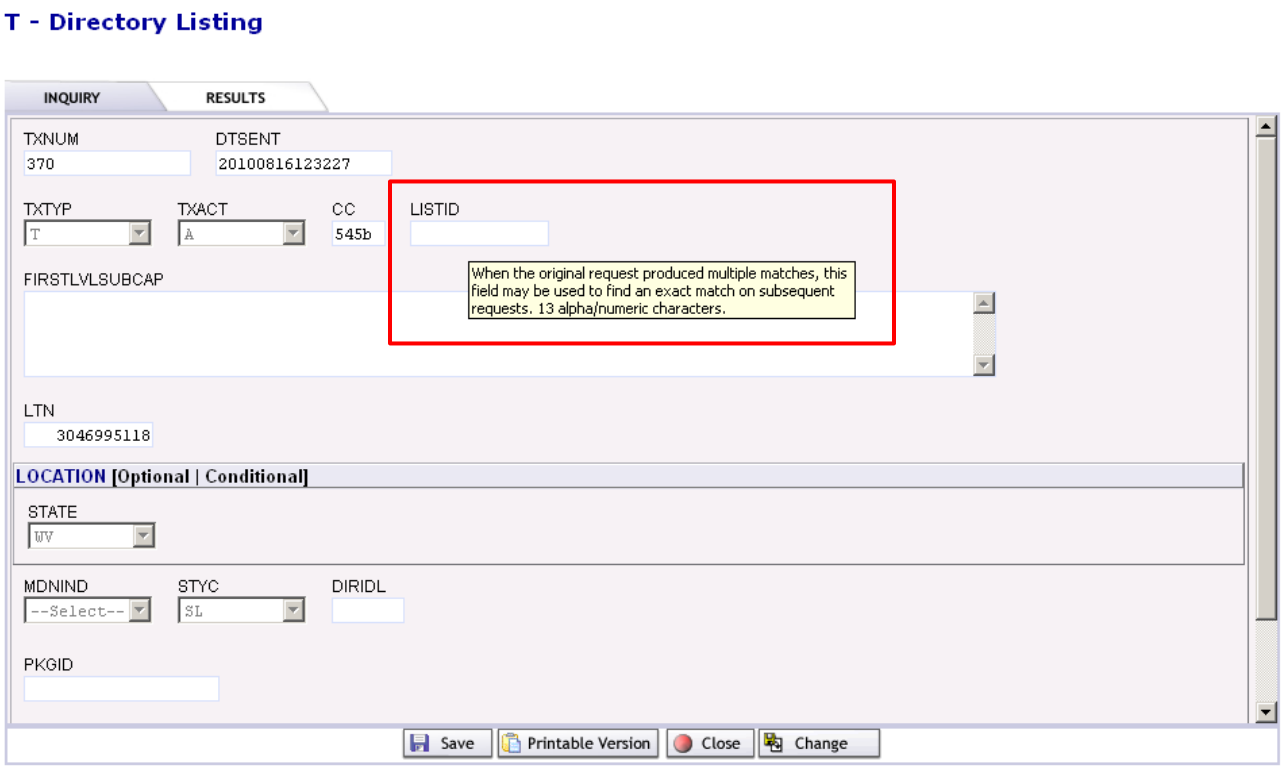
VFO Preorder Drop-Down Fields

This document provides descriptions of the fields in VFO Preorder that do not have tool tips. You can view tool tips on any field other than those that are drop-downs by pointing your mouse to the field, such as what is shown below:



This document provides the information on the drop-down fields which are not supported by drop-down values.

Preorder Transaction Types (TXTYP) and Activities (TXACT)

Before you start populating the Preorder transaction you need to complete the Preorder Initiation page, where you select a transaction type. Then just about all of these transactions have a field to indicate the activity you want to perform. The table below provides the list of transaction types with an X under the activities you can select for that transaction type.

		A - New Inquiry	B - Pre-Posted Service Orders	C - Post Service Orders	D - Pre-Posted and Posted Service Orders	E - Selection	F - Provisioning Service Order(s)	G - Change Reservation	K - Cancels Selection or Reservation	M - Modify Reservation Expiration Date	P - Delivery Validation only	R - Reservation	T - Validation TN	U - Return	X - Exchange
A	Address Validation	X				X							X	X	X
B	Telephone Number Assignment					X									
C	Feature/Product Service Availability	X													
D	Appointment Scheduling	X						X				X			
E	Customer Service Inquiry														
G	Reservation Maintenance								X	X				X	
H	xDSL Loop Qualification	X													
I	Installation Status	X													
J	Loop Make Up	X

Field Descriptions

The following are the descriptions of the fields outlined in this document.

Fields	Descriptions
ACT	Identifies the activity involved in this scheduling request.
AFT	Identifies the format of the address being supplied.
AGAUTH	Indicates that the customer is acting as an end user's agent and has authorization on file.
ALTRCSW	Indicates the Telephone Number returned is provided from an Alternate Switch within the Rate Center.
BLOCK	Identifies the type of blocking on the telephone number.
CANCELTN	Indicates the requested telephone number to be removed for the reservation.
CATYPE	Identifies the type of collocation arrangement.
CF	Identifies the number of additional Connecting Facilities available for the service address.
CKTTYPE	Type of circuit ID for installation requests.
COSTAT	Identifies the collocation assignment status.
CROSSEXCH	Identifies whether telephone numbers across exchanges are acceptable when requesting a sequence of numbers.
CTI	Identifies cut through facility status for the main telephone number at the service location.
CTVAL	Identifies a request to provide cut through information with this address validation request.
DIRTYP	Identifies the type of the directory (e.g., white pages, yellow pages)to be delivered.
DNA	Indicates data in the supplied field must not be abbreviated.
EXCHSEL	Identifies the exchange selection of the end user.
EXPIND	Indicates whether using conversation or direct version of transaction. Direct version utilizes only one inquiry and response. The Conversational version incorporates three consecutive, linked inquiry and responses, containing more extensive options not available in the direct version.
F1LPCP	Identifies the composition of the F1 loop segment.
F2LPCP	Identifies the composition of the F2 loop segment.
F3DTADJ	Identifies the type, quantity and proximity of disturbers in F3 segment.
F3LPCP	Identifies the composition of the F3 loop segment.
F4DTADJ	Identifies the type, quantity and proximity of disturbers in F4 segment.
F4LPCP	Identifies the composition of the F4 loop segment.
FE	Identifies the type of facility serving the end user.

© 2020 Ziply Fiber. Ziply™ is a trademark of Northwest Fiber, LLC. All rights reserved.

FPI	Identifies a request that PIC activity on the Working Telephone Number (WTN) be restricted.
FSQ	Identifies the status of the FTTP Facilities serving the end user.
FX	Identifies if Foreign Exchange is available at the End User Address
HNTYP	Identifies the type of hunting involved.
ICRI	Identifies the Inquiry Criteria used in the Service Order Inquiry.
LOOPSTAT	Identifies the status of the loop qualification.
LPHRASE	Identifies a pre-defined phrase associated with a listing.
LSCP	Identifies that the end user has requested the option of prohibiting the change of their current service provider or removing the option.
LTXTY	Identifies type of the associated text that will appear in the directory to assist the end user.
LTY	Identifies the type of listing with respect to publication and Directory Assistance (DA) appearance rules.
MDNIND	Used on subsequent queries when more than 250 listings are returned within a caption package.
MS	Identifies whether the request is for Resale or UNE, and in the case of CSR Directory Listing
OMTN	Indicates the omission/inclusion of TN in the directory for cross-reference listings.
PARSEIND	Indicates whether the CSR should be parsed.
PIC	Identifies the Presubscription Indicator Code (PIC) for the carrier the customer has selected for InterLATA traffic.
PRESPC	Identifies a provider specific code on the response transaction that represents what occurred on the associated inquiry transaction.
PRESPD	Identifies the provider's text used to clarify the response for the associated inquiry transaction.
PULSE	Identifies the type of pulsing.
PVCINDCODE	Provides information about any customer privacy indicators in use
REQTYP	Identifies the designated service type for appointment scheduling status.
SLI	Identifies the type of Sub-Loop the customer is requesting.
SSIG	Identifies the type of start signaling requested.
STYC	Identifies whether the listing is a straight line, straight line under (SLU), caption header, etc.
TNSEL	Indicates the disposition of the available telephone number(s).
TNTYPE	Indicates the type of telephone number requested in this inquiry.
TOS	Indicates the type of service
TXACT	Transaction Activity

W - Fiber Availability Response

AFT	FE - Facility Environment	FSQ - Fiber Service Qualification
B – Unnumbered	A - Fiber to the Premise	A - Fiber to the Premise Available – ONT must be installed
C - Provider Assigned House Number	B - Fiber to the Premise and Copper	B - Fiber to the Premise Available – ONT Present
D – Descriptive	C – Copper	
N - Normal Physical Service Address Number	D - Provisioning is not available at the address	

X - Loop Qualification DSL Response

FE - Facility Environment	LOOPSTAT - Loop Status		TXACT
A - Fiber to the Premise	E - Facilities qualified, conditioning required	A value of “E” indicates facilities are qualified but modifications must be made to the loop. Order due dates may be impacted.	P - Delivery Validation only
B - Fiber to the Premise and Copper	F - Not qualified due to length	A value of “H” indicates that it is technically infeasible to provide the requested service due to existing technology incompatibility.	
C - Copper	H - Not qualified due to Digital Single Subscriber Carrier (DSSC)	A value of "J" indicates a high probability of spectral interference with existing services.	
D - Provisioning is not available at the address		A value of "K" indicates a work order is already in progress to upgrade the facilities.	
	J - Not qualified due to disturber	A value of “L” indicates facilities are qualified.	
	K - Work order in progress	A value of “M” indicates DSL service cannot be provided for the facilities.	
	L - Facilities qualified, no conditioning	A value of “N” indicates that facilities are qualified and has existing DSL service.	
	M - Not qualified due to DSL service not available	A value of "P" indicates facilities cannot be qualified at the time of inquiry.	
	N - Data already exists on TN specified		
	P - Temporarily not qualified
